

FTT Global has developed the International Payment Gateway (IPG) to empower Intermediaries to provide international payment and FX services to their clients without the administrative burden usually associated with providing this service.

The system is designed to be simple to use and requires no previous experience of currency exchange or international payments. By following the IPG workflow, the intermediary can guide clients through each payment, step-by-step until a payment is ready to be sent.

The system will then provide a summary of the proposed payment and validate that everything is in order. When the payment is accepted as correct, the client will receive a confirmation on screen as well as an automated email confirmation.

Select the client from your list

Input trade details based on the client needs

Get client price (inclusive of all commissions)

Adjust your commission or accept default

Accept the deal

The system takes care of everything involved in the payment process (FX rates, payment booking, beneficiary details, payment tracking) leaving the intermediary and client to focus on their core business, safe in the knowledge that they are receiving the best exchange rates and that their payments are being managed by FTT Global.

The intermediary can set a default profit margin they wish to make on a given deal or else input an amount on each deal manually (within a pre-specified limit).

IPG is available as a standalone web application, available to any interested party with access to the internet. Once signed up, we can have you live on the system within a few hours.

Alternatively, it is possible to "White-Label" the platform and re-brand the IPG for use by your retained client base or satellite offices for deal-booking and international payments.
